Automatic Quick Changer – TripleA Robotics Wingman

The Wingman automatic quick changer system is a fully modular, easy to install solution that requires only the energy of the robot to engage-disengage each tool. This makes programming and startup fast and intuitive.

Wingman’s redundant locking mechanism enables for more electrical and pneumatic circuits for your application using built-in pneumatic quick change ports or expandable pneumatic or electric modules.

Automatic Tool Changers require some level of added integration, and we encourage you to partner with our EOAT Engineers to ensure a seamless implementation.
