

# 150mm (Large Size) Quick Changer with Air Shut Off

(Dimensioned drawings reduced to fit)

- The air valves automatically closes the air flow before the system is completely disengaged.
- It is not possible to open the air flow, if the flange is not engaged.
- The rotating tap valve solves all the problems of ball valve systems: the high pushing force necessary for engaging and the uncontrolled movements when disengaging.

**150mm Quick Changer**
